9.2	Banquet Deposits	37

SECTION 1

General

1.1 POS Login

Clover requires **4-digit** PINs. The old POS used 3-digit PINs.

YOUR EXISTING PIN STILL WORKS

Add a leading zero to make it 4 digits.

Example: 253 becomes 0253 .

Unlock the device

Enter the PIN on the screen.

Lock the device or switch accounts

Tap the **lock button** (bottom right) → enter the next PIN.

1.2 Menu Selection

Three menus are available:

- **Default POS Menu**
- **Banquet Drinks**
- **Banquet Food**

To switch between them:

1. Open any order within **Clover Dining**
2. Tap the **three dots** in the top right
3. Select the desired menu → tap **Save**

The selected menu stays configured on that specific device.

SECTION 2

Shifts

2.1 Clock In

1. Open the **Shifts** app from the home screen
2. Tap **Clock in** (bottom right)
3. Check the box if holding cash sales this shift
4. Tap **Clock In**

2.2 Clock Out

1. Open the **Shifts** app from the home screen
2. Tap **Clock Out** (bottom right)
3. Tap **Clock Out**

2.3 Server Shift Report

The shift report shows whether the house owes the server tip settlements or the server owes the house cash back.

1. Open the **Shifts** app from the home screen
2. Tap the row for the latest shift
3. If holding cash sales, check the **Holding cash sales** box
4. To declare cash tips, tap the **pencil** next to **Cash** in the **Tips** section → enter the amount
5. **Servers only** — see the **Sales by Label** section for the sales breakdown. Use this to calculate the tip out amount.
6. Tap **Print report**
7. Check the **Estimated Cash Settlement** section. If the house owes the server cash, hand a copy of the report to the bartender for tip payout.
8. Include the printout in the cash bag

2.4 Employee Food Discount

The employee food discount is **50% off**, regardless of how many hours the employee has worked that day.

The discount is applied to the whole order. Once it is applied, the employee pays the discounted total as a normal payment.

On Station

1. Open a **bar order** → add the food items
2. Tap **Add Order Discount** (bottom right)
3. Select **Employee Food Discount (50%)**
4. Pay for the discounted order normally

On Flex

1. Open a **bar order** → add the food items
2. Tap the green **Pay** button (top left)
3. Tap the **three dots** menu button (bottom right) → tap **Add Order Discounts**
4. Select **Employee Food Discount (50%)**
5. Pay for the discounted order normally

SECTION 3

Opening Orders

3.1 Open Member Order

1. Open the **Member Link** app from the home screen
2. Scan the member ID card, or type the member's name or number and tap **Search**
3. Tap the member from the search results
4. Verify membership status is **active**
5. Tap **New Order** — **Clover Dining** opens and the new order appears at the top of the **Bar Tab** with the member's name
6. Tap the order to open it
7. Enter the guest count and tap **Save**
8. **If serving at a table**, move the order to the seated table. Steps vary by device:
 - **On Station**: tap **Move Order to An Available Table** → tap the table number. The table turns blue once seated. Tap the blue table again to open the order.
 - **On Flex**: tap the **green dollar square** (top left) → **three dots** (bottom right) → **Move Order** → tap the table number → tap the blue row to open the order.

If serving at the bar, skip this step — the order stays on the **Bar Tab**.
9. Proceed with taking the order — go to [Updating Orders](#) → [Add Items](#)

DON'T LEAVE THE ORDER EMPTY

Add at least one item before navigating away. Clover Dining auto-deletes orders that have no items on them.

3.2 Open Non-Member Order

1. Open the **Clover Dining** app from the home screen
2. Navigate to the **Tables** tab or the **Bar Tab** depending on where the customer is seated
3. Open the order:
 - **If serving at a table:** tap the corresponding table number for the seated table.
 - **If serving at the bar:** tap the **plus** button (bottom right) to open a new bar tab. Under **Order Type** on the left, skip it for a dine-in order (it defaults to **Dine-in**), or select **Take Out Order** for a takeout order.
4. Enter the guest count and tap **Save**
5. Proceed with taking the order — go to [Updating Orders → Add Items](#)

DON'T LEAVE THE ORDER EMPTY

Add at least one item before navigating away. Clover Dining auto-deletes orders that have no items on them.

3.3 Takeout Order

Takeout is entered one of two ways:

- **A new takeout order** — the whole order is takeout, usually entered by the host. Change the order's **Order Type** to **Take Out Order**.
- **Takeout added to a dine-in order** — a server adds takeout food to an order that has already been served. The order stays dine-in; add the **Take Out** item after the takeout food.

New takeout order

When an order is takeout from the start, remember to change the **Order Type** to **Take Out Order**. Steps vary by device.

On Station

1. Open **Clover Dining**
2. Tap the **Bar Tab**
3. Tap the **plus** button (bottom right) to open a new order
4. Under **Order Type** on the left, select **Take Out Order**
5. Enter the guest count and tap **Save**
6. Proceed with taking the order — go to [Updating Orders → Add Items](#)

On Flex

1. Open **Clover Dining**
2. Tap the **Bar Tab**
3. Tap the green **plus** button (bottom right)
4. Tap the green **Pay** button (top left)
5. From the dropdown in the top left, select **Take Out Order**
6. Tap the **back** button to return to the menu → take the order

NOTE

The order prints to the kitchen with **Take Out** at the top of the ticket.

Add takeout to a dine-in order

Use this when a server has already served a dine-in order and the customer wants food to take out.

1. Open the order back up
2. Add the takeout food item
3. Add the **Take Out** item directly after it

KEY DIFFERENCE

The order stays **Dine-in**. The **Take Out** item is a signal to the kitchen: it prints on the ticket right after the food item added before it, marking that item as takeout.

SECTION 4

Updating Orders

4.1 Add Items

PREREQUISITE

An order must be open on screen.

- **Continuing from Opening Orders:** the order is already open — continue below.
- **Returning to an existing order:** find it on the **Tables** tab or **Bar Tab** and tap to open.

REMINDER

Ensure the guest count is correct. If needed, see [Updating Orders → Modify Guest Count](#).

Add an item

For multi-guest orders, ensure the correct guest is selected prior to adding items. Tap **whole table** for shared items, or tap the specific guest. On **Station**, the guest list is in the order summary on the left. On **Flex**, guests appear as icons to the right of the **green dollar box** — scroll horizontally to see more.

Next, add the items. The categories are listed on the full screen:

1. Tap the category for the item — the screen opens into that category
2. Tap the item name once to add it to the order
3. The screen automatically returns to the category list, ready for the next item

If the item requires modifier choices, the modifier options display after the item is tapped.

Custom Modifiers

A custom modifier adds a note to an item that prints to the kitchen. Custom modifiers **cannot** add anything that carries an additional cost. If an item needs to be added for a cost, see [Updating Orders → Add Custom Item](#).

Tap the item in the order summary, then do one of the following:

- **Type a custom modifier** — tap the **Custom Modifier** text box to open the keyboard
- **Change a pre-configured modifier** — tap the blue **pencil** button next to **Modifiers**

There is only one custom modifier entry field. To add multiple custom modifiers, use the **newline** button on the keyboard to separate them.

NOTE

The **plastic cup** modifier is applied here. It is not shown by default, but it is faster to reach by tapping the blue modifiers **pencil** than by typing it as a custom modifier.

4.2 Add Custom Item

This uses the same strategy as the old POS. If an item needs to be added to the order that is **not on the menu**, use one of the **OPEN** items. At least one **OPEN** item is included in each category.

1. Tap the category where the item would usually be found
2. Tap the **OPEN** item for that category — for example, **OPEN FOOD - ENTREE**. It is variable price, so type the price
3. Once the item is added, tap it in the order summary
4. Tap the **Custom Modifier** text box → type what the actual item is

WARNING

Only use an **OPEN** item for exceptions. If the same item is being added this way several times per shift, bring it up to management so it can be added to the menu as a real item.

4.3 Remove or Void Items

If an item has been added to the order but **has not been printed** to the kitchen, it can be **removed**. If the item **has been printed**, it must be **voided**, and a reason provided.

PREREQUISITE

An order must be open on screen.

- **Continuing from another workflow:** the order is already open — continue below.
- **Returning to an existing order:** find it on the **Tables** tab or **Bar Tab** and tap to open.

Remove an item

Steps vary by device:

- **On Station:** find the item on the left order panel → tap it once → tap **Delete**.
- **On Flex:** tap the **green dollar box** (top left) to open the order → find the item → tap it → tap **Delete**.

Void an item

The steps are the same as removing an item, except there is no **Delete** button. There is a red **Void** button instead.

- **On Station:** find the item on the left order panel → tap it once → tap the red **Void** button.
- **On Flex:** tap the **green dollar box** (top left) to open the order → find the item → tap it → tap the red **Void** button.

After tapping **Void**, select a reason.

NOTE

Manager approval may be required to proceed.

4.4 Modify Guest Count

PREREQUISITE

An order must be open on screen.

- **Continuing from another workflow:** the order is already open — continue below.
- **Returning to an existing order:** find it on the **Tables** tab or **Bar Tab** and tap to open.

On Station

The order summary on the left displays the guest count in blue at the top. Tap the blue text → change the number of guests → tap **Save**.

On Flex

The guest bar is to the right of the **green dollar box**. Scroll to the far right of the guest bar — the guest count appears in blue. Tap the blue count → enter the new guest count → tap **Save**.

4.5 Coursing & Firing

Inventory items are preconfigured to fire to the correct printer. Firing an order sends each item to its assigned printer.

Fire All

Add all items for the current round first (for example, the first round of drinks), then fire the order.

- **On Station:** the **Fire All** button appears in the bottom left under the order summary.
- **On Flex:** tap the **green pay box** → tap **Fire All** (bottom left).

Manual Coursing

After the first round is fired, return later to add the next round (for example, dinner after drinks). Tap **Fire All** again — only the newly added items fire.

Refire or reprint an item

A manual refire can be triggered at any time for any item — useful when an item needs to be reprinted or modified.

- **On Station:** open the order → tap **three dots** in the bottom menu → tap **Refire to Kitchen**.
- **On Flex:** open the order → tap the **green pay box** → tap **three dots** (bottom right) → tap **Refire to Kitchen**.

The refire screen pre-checks only items that have not been fired yet. To refire an already-fired item, check its box manually, then tap **Print** (bottom right).

4.6 Moving Items

Items may need to be moved from one guest to another, or from the whole table to one guest.

PREREQUISITE

An order must be open on screen.

- **Continuing from another workflow:** the order is already open — continue below.
- **Returning to an existing order:** find it on the **Tables** tab or **Bar Tab** and tap to open.

On Station

1. In the order summary on the left, find the guest with the item → tap **three dots** for that guest row → tap **Move Items**
2. On the left, check the box for the item being moved
3. In the center, choose the destination — **whole table** or a different guest

On Flex

1. Tap the **green pay button** to open the order summary
2. Find the guest with the item → tap **three dots** for that guest row → tap **Move Items**
3. Check the box for the item being moved
4. Select the destination guest from the choices below

4.7 Moving Guests

Guests can be moved to a new table or join an already seated table.

PREREQUISITE

An order must be open on screen.

- **Continuing from another workflow:** the order is already open — continue below.
- **Returning to an existing order:** find the order for the table or bar area where the guest is currently seated. Tap to open.

On Station

1. In the order summary on the left, find the guest's row → tap **three dots** → tap **Move Guest**
2. Select the **Bar** or **Tables** tab depending on the destination
3. Select the bar or table order to move the guest to

After the move, the previous order displays without that guest. To see the moved guest on the new order, tap the **back button** in the bottom navigation menu (back arrow), then select the **Bar** or **Tables** area and tap the destination table. The moved guest appears on the order summary with a notation in parentheses showing which table they came from.

On Flex

1. Tap the **green pay button** to open the order summary
2. Find the guest → tap **three dots** on their guest row → tap **Move Guest**
3. Select the destination **Bar** or **Tables** area
4. Select the table number to move the guest to

After the move, the previous order opens without that guest.

REMINDER

If the guest was a member and assigned to the old order, the membership assignment will need to be manually moved to the new order. Unassign the member from the previous order and reassign to the new order. See [Updating Orders → Reassign Member](#).

4.8 Moving Tables

Move an entire order to a new table. Not to be confused with [Updating Orders → Combining Tables](#).

PREREQUISITE

An order must be open on screen.

- **Continuing from another workflow:** the order is already open — continue below.
- **Returning to an existing order:** find it on the **Tables** tab or **Bar Tab** and tap to open.

On Station

1. Tap **Move Order** in the bottom menu bar
2. Select **An Available Table** or **the Bar**
3. Tap the destination table number → tap **Confirm**

The order is moved. Tap the destination table to open the order at its new location.

On Flex

1. Tap the **green pay button** (top left) → tap **three dots** (bottom right) → tap **Move Order**
2. Select **An Available Table** or **the Bar**
3. Tap the destination table → tap **Confirm**

The order is moved. Tap the destination table to open the order at its new location.

4.9 Combining Tables

Two tables can be combined by merging one table into another.

PREREQUISITE

The orders for each of the two tables must already be created and active.

NOTE

The first order will be merged into the second order.

Within **Clover Dining**, navigate to the first order and open it.

On Station

1. Tap **three dots** from the bottom menu → tap **Combine Orders**
2. Navigate to the **Bar** or **Tables** tab where the destination order resides
3. Tap the order or table — the first order combines into the second

To verify, tap the destination order. The order summary on the left shows the moved guests with a notation in parentheses indicating which table they came from.

On Flex

1. Tap **three dots** in the bottom right of the first order → tap **Combine Orders**
2. Tap the bar or table order to merge into
3. Tap **Combine Orders** to complete the merge

4.10 Reassign Member

Assign or unassign a member to an order that has already been created.

PREREQUISITE

An order must be open on screen.

- **Continuing from another workflow:** the order is already open — continue below.
- **Returning to an existing order:** find it on the **Tables** tab or **Bar Tab** and tap to open.

Open Member Link

Navigate to the order payment screen:

- **On Station:** from the main order screen, tap the **green pay button** below the order summary.
- **On Flex:** tap the **green pay button** in the top left → tap **Pay**.

Once on the payment screen, tap the **Member Link** button at the bottom. **Member Link** opens and shows any member currently assigned to the order.

Assign a member

1. Search for the member's name or number, or scan the membership ID card
2. Tap the member in the search results → tap **Assign**

Unassign a member

Tap the **red X** on the member chip → tap **Unassign**.

Return to the order

Tap **Done** in the top right to return to the payment screen, then tap the **back arrow** in the bottom navigation menu to return to the order. The member assignment is preserved.

SECTION 5

Closing Orders

5.1 Bill Printing

There are two options for printing bills: **Print Entire Bill** or **Print Individual Bills**.

- **Print Entire Bill** prints the full order on one bill.
- **Print Individual Bills** prints a separate bill per guest. Items assigned to **whole table** are split equally across each guest's bill.

PREREQUISITE

An order must be open on screen.

- **Continuing from another workflow:** the order is already open — continue below.
- **Returning to an existing order:** find it on the **Tables** tab or **Bar Tab** and tap to open.

On Station

From the order, tap one of the two buttons at the bottom — **Print Entire Bill** or **Print Individual Bills**.

On Flex

1. Tap the **green pay button** (top left) → tap **three dots** (bottom right)
2. Choose **Print Entire Bill** or **Print Individual Bills**

NOTE

Regardless of which print format is chosen, payment can still accommodate any combination of guests. See [Closing Orders → Take Payment](#).

5.2 Take Payment

Payment can be split across several methods. The split method is independent of the format used to print the bill — see [Closing Orders → Bill Printing](#).

PREREQUISITE

An order must be open on screen.

- **Continuing from another workflow:** the order is already open — continue below.
- **Returning to an existing order:** find it on the **Tables** tab or **Bar Tab** and tap to open.

On Station

Tap the **green Pay** button under the order summary on the left. The payment screen opens with the default of one payment for the full order. Alternative payment options appear as tabs across the top. Select the desired tab to take each payment.

On Flex

1. Tap the **green pay box** (top left) → tap the **green Pay** button (bottom right)
2. The payment screen opens with the default of one payment for the full order. To switch modes, tap the **three dots** (top right).

Payment options

- **Split Custom Amount** — can be used to split the full order amount evenly among all guests, or any other split the guests want.
- **Split By Items** — select specific items to include in this payment.
- **Split By Guest** — pay each guest's individual bill. A single guest can also cover the bill for a subset of guests.

Pay Full Amount

The default payment screen accepts payment for the full amount of the order. Swipe the credit card or enter the amount of cash paid to complete the transaction. If credit is used, the receipt prints

automatically. If cash is used, the POS prompts the server to optionally print the receipt.

Split Payment

If the order is paid across more than one payment:

1. After each payment, the receipt prints automatically if credit was used. If cash was used, the POS prompts the server to optionally print the receipt. The remaining order total then appears.
2. Tap **Next Payment** to take the next partial payment
3. The order remains open and the table remains seated until the full order total has been covered

5.3 Tip Adjustment

Record tips that customers handwrite on their printed credit-card receipts.

PREREQUISITE

The order must be closed with at least one credit payment, and the guest must have written the tip on the printed receipt.

1. Note the **Transaction number** on the printed receipt where the guest wrote the tip
2. From the home screen, launch the **Tips** app
3. Find the row where **Trans #** matches the transaction number on the receipt
4. Tap the row — a keypad opens for the tip amount
5. Enter the tip — the **Total** auto-calculates from **Subtotal + Tip**
6. Tap **Done** (top right on Flex, bottom left on Station)

The tip is recorded. The Tips app stays open to enter more tips.

SECTION 6

Membership and Daily Book

6.1 Membership Renewal

1. Open the **Member Link** app → open an order for the member (see [Opening Orders → Open Member Order](#))
2. Once **Member Link** opens the order and sends it to the **Bar Tab**, tap the order
3. From the **Membership Renewals** menu category, add the renewal package that matches the member's membership in **Member Link**

NOTE

If the member also wants to pay for their spouse, add the spouse membership renewal item as well. The spouse does not need to scan their member card.

4. Give the customer the paper membership renewal information card → have them fill it out now and give it back

This process needs to remain as it is currently done.

5. Take payment from the payment screen as usual

6.2 Sign the Book

Order just for signing the book

1. Open the **Member Link** app → scan the member card and open the order for the member
2. Once **Member Link** creates the order, it shows in the **Bar Tab** → tap the order
3. From the **DAILY BOOK** menu category, add the **Daily Book** item
4. Pay for the order with **\$1 cash**

The member has now signed the book.

Member with an open bar tab or table order

1. From the **DAILY BOOK** menu category, add the **Daily Book** item to the order
2. Double check the member is assigned to the order. This can be done from the payment screen while the order is open:
 - Tap the green **Pay** button to get to the payment screen
 - At the bottom under **Other**, select **Member Link** to see if the member is already assigned
 - If the member is not assigned, assign them to the order

SECTION 7

Gift Cards

7.1 Old Gift Cards

Clover POS devices are unable to scan old gift cards. An old gift card can be manually applied to a Clover order as a custom tender. Alternatively, the gift card can be re-issued as a Clover gift card and the balance can be transferred by issuing Store Credit.

Begin by finding the old gift card by its ID number on the old gift card database (printout). Then take note of its remaining balance and proceed below.

Pay with an old gift card

Take the difference between the old gift card balance and the order total to determine whether the balance covers the order in full or only part of it.

If the balance covers only part of the order

1. On the payment screen, select **Split Custom Amount** → enter an amount equal to the old gift card balance
2. Pay that amount with the **Old Gift Card** custom tender

NOTE

The **Old Gift Card** custom tender appears as a button on the payment screen, in the bottom half of the screen.

3. Prompt the customer to pay for the remainder of the order with cash or credit

If the balance exceeds the order total

1. Pay for the order in full with the **Old Gift Card** custom tender

NOTE

The **Old Gift Card** custom tender appears as a button on the payment screen, in the bottom half of the screen.

2. Calculate the remaining balance to transfer:

$$\text{Transfer Balance} = \text{Old Gift Card Balance} - \text{Order Total}$$

3. See below for steps on how to transfer the remaining balance to a Clover gift card

Transfer the balance to a Clover gift card

Use this to transfer a balance from an old gift card to a Clover gift card.

1. Open the **Gift Cards** app from the home screen → select **Issue Store Credit** from the main menu
2. Select the amount of credit to load onto the card → tap **Next**
3. Swipe the gift card → tap **Pay**
4. On the payment screen, tap **\$0.00 Cash** → tap **Pay Cash**

This loads the card with the balance at a 100% discount.

7.2 Pay with Clover Gift Card

A gift card is taken on the same screen as a credit card. There is no separate gift card button — swipe either card on the main payment screen.

PREREQUISITE

The order must be open on the payment screen. See [Closing Orders → Take Payment](#).

Swipe the gift card. The POS reads the balance and applies it to the order.

If the balance exceeds the order total

The payment completes. The remaining gift card balance prints on the receipt. Return the card to the customer.

If the balance exactly covers the order total

The payment completes and the card is left at a zero balance.

RECLAIM THE CARD

Take the card back from the customer. A zero-balance card is re-used the next time a gift card is purchased — reload it through [Gift Cards → Load a Clover Gift Card](#).

If the balance does not cover the order total

The POS shows the shortfall and prompts for an additional payment. Take the remainder as a second payment to close the order. The card is left at a zero balance.

RECLAIM THE CARD

Take the card back from the customer. A zero-balance card is re-used the next time a gift card is purchased — reload it through [Gift Cards → Load a Clover Gift Card](#).

7.3 Check Balance

From the home screen, open the **Gift Cards** app.

Swipe the gift card, or select **Check Balance** from the main menu.

If the card is not active

A dialog displays showing the card is not active.

If the card is active

The balance displays, along with buttons to **Add Money** or **Print Balance**.

7.4 Load a Clover Gift Card

From the home screen, open the **Gift Cards** app.

Before loading money onto a Clover gift card, check its balance to determine whether it is already activated. Swipe the gift card — the POS shows either the current balance or a dialog reporting the card is not active.

If the card is already activated

The current balance displays.

1. Tap **Add Money**
2. Select the amount of money to add → tap **Next**
3. Follow the payment screen to complete the order

If the card is not activated

Activating the card and loading it with money happen in the same step.

1. Select **Sell Gift Card** from the main menu
2. Select the amount of cash to load → tap **Next**
3. Swipe the gift card
4. Complete the payment screen to activate the card

The gift card balance prints with the receipt.

SECTION 8

Bartender

8.1 Record Cash Events

Cash events record the reason for putting cash in or taking cash out of the register. Common use: server tip payouts.

1. Open **Clover Dining**
2. Tap the **three dots** in the top right → tap **Open Cash Drawer**
3. Select **Add** or **Remove**
4. Enter the amount and reason → tap **Continue** (right side)
 - For tip payouts, enter `tips - <server first name>` as the reason
5. The drawer opens automatically — add or remove the cash as recorded

NOTE

Cash events are recorded on the [Bartender → Terminal Settlement Report](#).

8.2 Terminal Settlement Report

The Terminal Settlement Report shows all transactions for the bartender's shift, including all cash events.

1. Launch the **TSR** app from the Clover home screen
2. The app auto-detects and populates the current shift for the bartender PIN logged into the device
3. If the shift dates are incorrect, manually update them
4. Tap **Generate Report** — the report displays in the right panel
5. Tap **Print Report** to print

8.3 Employee Shift Drink

The employee shift drink discount will apply **100% off** to the whole order.

On Station

1. Open a **bar order** → add the shift drink
2. Tap **Add Order Discount** (bottom right)
3. Select **Employee Shift Drink (100%)**
4. Tap **Pay** and select **\$0.00** to complete the discounted order

On Flex

1. Open a **bar order** → add the shift drink
2. Tap the green **Pay** button (top left)
3. Tap the **three dots** menu button (bottom right) → tap **Add Order Discounts**
4. Select **Employee Shift Drink (100%)**
5. Tap **Pay** and select **\$0.00** to complete the discounted order

8.4 Drink Chips

Issue a drink chip

1. From the **DRINK CHIP** menu category, add the drink chip item to the order
2. The price is variable — type the amount of the drink chip
3. Write the value of the drink chip on the sticker

Redeem a drink chip

The value of a drink chip must be applied to the order manually, using the **Drink Chip** custom tender.

WARNING

Only apply a drink chip **at checkout, as payment is being taken.**

If the order is only for the one drink

1. On the payment screen, at the bottom under **Other**, select **Drink Chip** to pay for the order in full

If the drink chip does not cover the full order balance

1. Tap the green **Pay** button → on the payment screen, tap **Split Custom Amount** at the top
2. Select **Custom** → type the amount of the drink chip to pay the order down by that amount → tap **Pay**
3. At the bottom under **Other**, select **Drink Chip**
4. The remaining balance shows → tap **Next Payment** → pay for the remainder of the order

SECTION 9

Banquets

9.1 Banquet Orders

Banquet orders are entered into the POS the day of the banquet.

Create the banquet order

1. Log in with the banquet PIN — **0300** (AM) or **0400** (PM)
2. Open **Clover Dining** → tap the **Banquet** tab at the top
3. Select the appropriate **AM** or **PM** banquet table — this creates the banquet order
4. Add the items from the banquet menu

NOTE

If the device is not on the banquet menu, see [General → Menu Selection](#).

Banquet Bar

A banquet bar is either a **cash bar** or an **open bar**.

Cash bar

Cash bar sales are sold **separately** from the banquet order, under the banquet bar PIN login:

- **BANQUET BAR AM** — PIN **0301**
- **BANQUET BAR PM** — PIN **0401**

Once logged in under the banquet cash bar PIN, use the **Bar** tab to create orders as needed.

Open bar

For an open bar, the bartender stays logged in under the same PIN used to **create the banquet order**. Do not switch to the banquet cash bar PINs.

The bartender can set up the open bar in one of two ways.

Guests on the banquet order

1. Move the banquet food and all other items to **Guest 1**
2. Add **Guest 2** → add all of the open bar items to Guest 2

TIP

To set up multiple guests on the order, see [Updating Orders → Modify Guest Count](#).

A separate open bar order

As an alternative, create an entirely new order to hold the open bar:

1. Open **Clover Dining** → tap the **Banquet** tab at the top
2. Select the corresponding **BANQUET BAR AM** or **BANQUET BAR PM** table — this creates the open bar order

At checkout, this order can be merged with the main banquet order if the customer wants to pay with one check.

When the customer is ready to pay, they can pay as **two checks** or **one**. See **Pay for a banquet** below.

Add the gratuity

The added gratuity must be calculated manually and added to the order as an item, from the **BQ Added Grat** category. The price is variable and must be entered.

Pay for a banquet

Paying for a banquet is two steps. The first only applies if there was an open bar.

1. Set up the checks (open bar only)

If there was an open bar, ask the customer how they want to pay, and adjust the order on the POS to match:

- **Two checks** — print individual bills, then use **Split By Guest** at checkout. See [Closing Orders → Take Payment](#).
- **One check** (banquet order and open bar combined) — select **Print Entire Bill**, then tap the green **Pay** button to take payment for the whole order. See [Closing Orders → Take Payment](#).

If the open bar is a **separate order**, pay it as its own check, or merge it with the main banquet order for one check. See [Updating Orders → Combining Tables](#).

2. Apply the banquet deposit

Once the order is ready to be paid, the banquet deposit must be applied at checkout, as a **custom tender**, to pay down the order by an amount equal to the banquet deposit.

WARNING

If the open bar is being paid as a **separate check**, apply the banquet deposit to the **primary banquet order**, not the open bar.

On Station

1. Tap the green **Pay** button → on the payment screen, tap **Split Custom Amount** at the top
2. Select **Custom** → enter the amount of the banquet deposit → tap **Pay**
3. At the bottom under **Other**, tap **Banquet Deposit**
4. The remaining balance shows → tap **Next Payment** → tap **Pay**
5. Take the remaining payment from the customer as normal

On Flex

1. Tap the green **Pay** button (top left) → tap the green **Pay** button (bottom right)
2. On the payment screen, tap the **three dots** (top right) → select **Split Custom Amount**
3. Select **Custom** → enter the amount of the banquet deposit → tap **Pay**
4. At the bottom under **Other**, tap **Banquet Deposit**
5. The remaining balance shows → tap the green **Take Next Payment** button → tap **Pay**
6. Take the remaining payment from the customer as normal

9.2 Banquet Deposits

How to sell a banquet deposit prior to the event.

On Station

1. Open **Clover Dining** → on the **Bar** tab, tap the **+** button (bottom right) to open a new order
2. Add the **DEPOSIT PRIOR TO EVENT** item from the **BQ Deposits** category — the price is variable and must be typed
3. Tap the green **Pay** button to get to the payment screen → accept the payment

On Flex

1. Open **Clover Dining** → on the **Bar** tab, tap the **+** button (bottom right) to open a new order
2. Add the **DEPOSIT PRIOR TO EVENT** item from the **BQ Deposits** category — the price is variable and must be typed
3. Tap the green **Pay** button (top left) → tap **Pay** (bottom right) → accept the payment
